

Forecast.it integration

Getting started!

Integration with Forecast.it

Get the best start...

This is a guide on how to set up the integration between TimeLog Project and Forecast.it for further data analysis.

1 The integration within Forecast.it

Within Forecast.it the following information is needed (Figure 1):

Figure 1

The information you need from TimeLog Project.

The screenshot shows a web interface for TimeLog settings. At the top, there are two buttons: "Verify settings" and "Save & close". Below these are two tabs: "Basic Settings" (selected) and "Data Synchronization". Under "Basic Settings", there is a checked checkbox for "Integration Enabled". Below this are several input fields with placeholder text: "Server URL" (The base URL of your TimeLog app (app1.timelog.com)), "Account name" (Your account name), "Username" (The username used in TimeLog), "Password" (The password used in TimeLog), "Reporting API username" (The reporting API username), "Reporting API password" (The reporting API password), "Site code" (The reporting API site code), and "API key from Forecast to use" (c4f4bd6a-4fbe-45e8-bab5-45b03d14db7b). A dropdown arrow is visible next to the API key field.

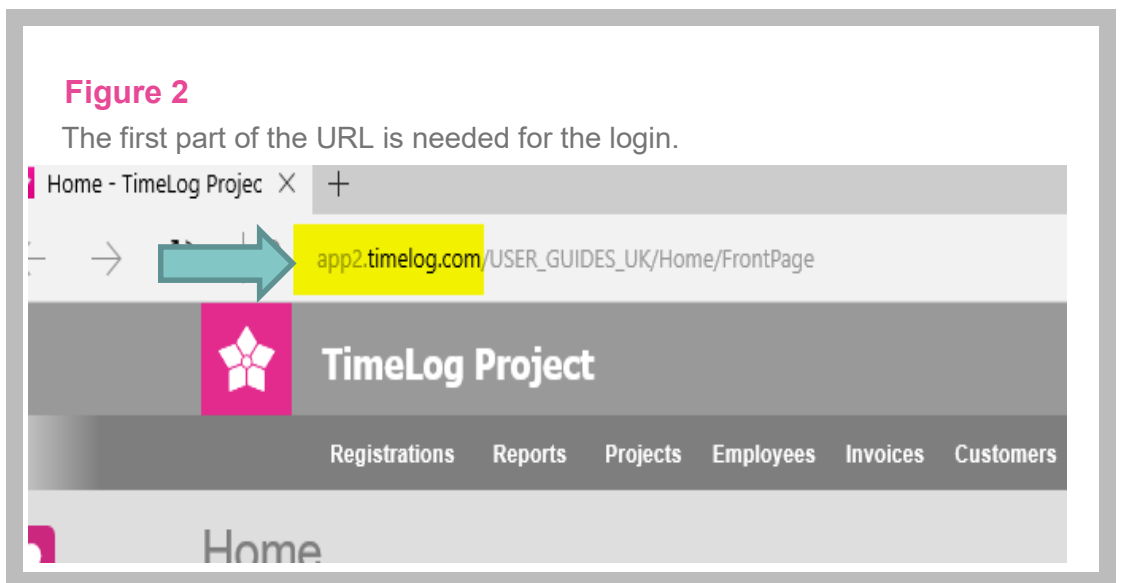

2 Finding information in TimeLog Project

The information regarding TimeLog Project can be found the following way:

2.1 Server URL

When logged in to TimeLog Project, you can find the Server URL in the top of your browser.

You need the information before your own company (account) name (Figure 2):

2.2 Account Name, Username and Password.

The Account Name (1), Username (2) and Password (3) are the same as entered on the TimeLog Project login page (see Figure 3 on the next page).

We suggest that you create a user specifically for this integration, so that the integration does not break, if the used employee changes password or stops in the organisation.

PLEASE NOTE! You need to add **User role privileges** to this user in order to manage all projects.

T

he default Project Manager role has this access unless it has been modified.

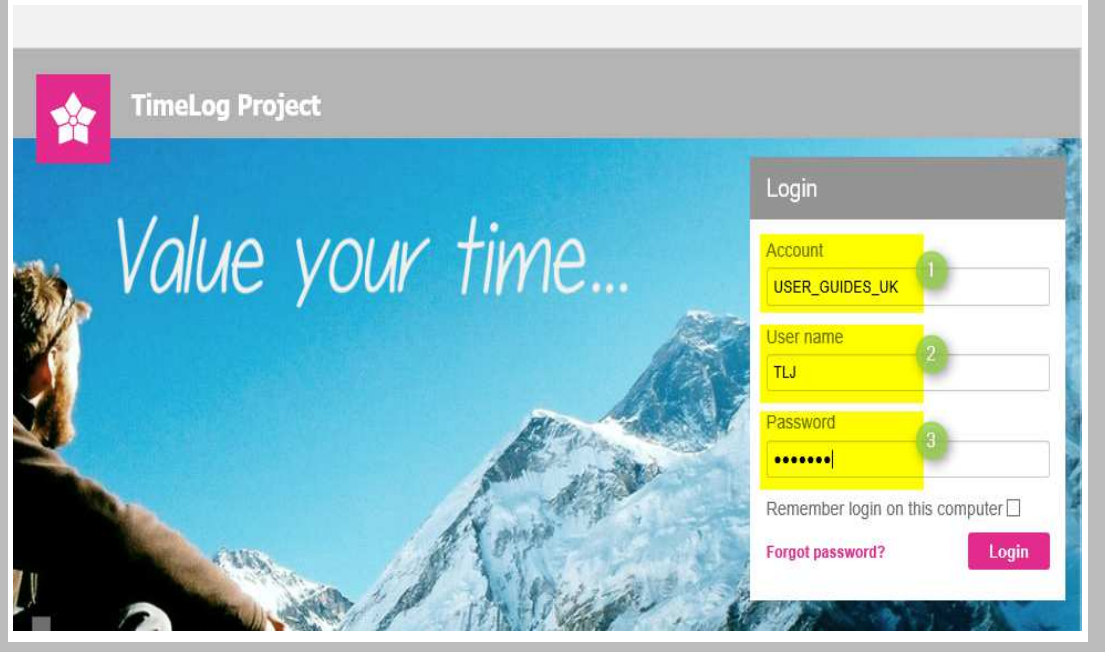

The role can be edited in the **System administration -> Employees -> User roles and rights management**.

Figure 3

You need the same login information as you use for TimeLog Project.

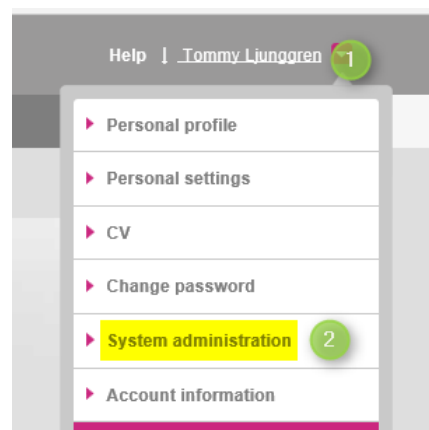

2.3 Reporting API Username, Password and Site Code

These are used within TimeLog Project in the system administration, which is accessed from the upper right corner in your profile menu (Figure 4):

Figure 4

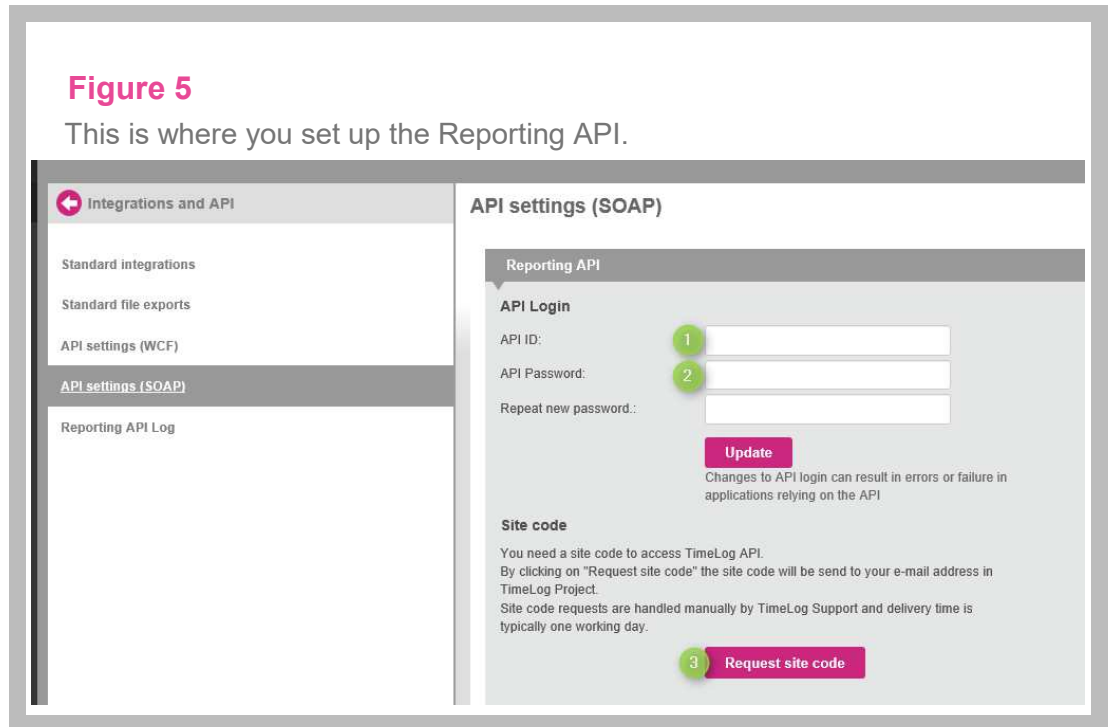

You find the necessary information in the **System administration**.

The Reporting API Username (1) and Reporting API Password (2) has to be the same as those entered on this page.

The site code will be sent to the employee who is logged in when pressing **Request site code** (3) (Figure 5):

If you need further information regarding the settings in TimeLog Project, please feel free to contact our support at support@timelog.com and write Forecast.it integration in the subject line.

Enjoy your work with TimeLog Project and Forecast.it.
